EXPERIENCE

Amazon Web Services, Software Development Engineer

Sept 2024 – Feb 2026

- Engineered real-time metrics logging using **C**, **Java** and **Rust** for a high-performance Network Load Balancer, enabling instant root-cause analysis for **1M+ packets/sec** and eliminating operational bottlenecks.
- Designed and optimized components of a **distributed system** handling high-throughput **TCP**, **UDP**, and **DNS** traffic across multi-region deployments.
- Automated** regional service builds for the Load Balancer, reducing deployment time by 50% and scaling to new markets with zero manual intervention using **TypeScript**, **Python**, and **AWS** internal systems.
- Revamped **CI/CD** pipelines, accelerating patching by 75% and ensuring 100% SLA compliance across global services.
- Cut **on-call** alert noise by 40% through automated ticket de-duplication and issue categorization, enabling faster and more effective incident resolution.
- Mentored** interns and junior engineers, supporting design reviews, code quality, and onboarding to service architecture
- Authored **6 technical design documents** with 4 end to end implementation and drove consensus across cross-functional teams

Citi bank, Software Developer

July 2023 – July 2024

- Enhanced CITI Business Online for **1M+** users by launching transaction features **React**, **REDUX**, **TypeScript**, **HTML**, and **CSS**.
- Built internal tooling to centralize customer account management, reducing data retrieval time for developers by 60%.
- Architected integration of **frontend** applications with backend services via **RESTful APIs**, improving transaction **reliability** and reducing authentication **latency**.
- Wrote unit and integration tests using **Jest**, decreasing production bugs by 5% and improving release reliability

Amazon Web Services, Software Dev Engineer Intern

May 2023 – July 2023

- Delivered a production-ready **CLI** tool in **C** and **Rust** within 10 weeks, enabling **network packet** analysis and improving diagnostics for engineering teams.
- Enhanced network traffic examination by capturing and presenting **packet headers**, reducing issue resolution time by 30%.
- Collaborated across teams and contributed beyond project scope, improving codebase quality and documentation

Microsoft, Software Engineer Intern

May 2021 – Aug 2021

- Designed and shipped new **front-end** features for **Microsoft Edge Travel** with, enhancing UX for 1k+ users.
- Implemented filters and **geospatial** mapping, improving search relevance and increasing user engagement
- Built a travel card details page, boosting interaction with travel recommendations.

McGill University IMAGE project, Software Developer part-time

Sept 2021 – April 2022

- Developed a **cross-browser settings** page for an accessibility extension, enabling 500+ visually impaired users to customize features like **haptics** and spatialized audio with **Vanilla JavaScript** and modern **ES6+** features (scope management, closures, inheritance, async operations).
- Collaborated with design and QA to ensure a seamless, accessible experience across Chrome, Firefox, and Edge.

EDUCATION

McGill University – Montreal, Canada

Bachelor of Science – Computer Science and Physics

SKILLS

Programming Languages: C, Rust, Java, JavaScript, TypeScript, Python, HTML, CSS, Bash, OCaml

Frameworks & Libraries: React, Redux, React Native, Angular, Express.js, Spring Boot, REST API, GraphQL, MySQL, DynamoDB, Kubernetes, PyTorch, TensorFlow, Kafka

Tooling & Platforms: AWS (EC2, S3, DynamoDB, Step Functions, Lambda, Elastic IP), Git

Systems & Networking: TCP, UDP, DNS, Distributed Systems, Data Plane, Control plane, Networking

SELECTED PROJECT

G-City Android App

May 2021

- Launched a mobile app in Zimbabwe connecting 2k+ citizens with City Council services, improving access and engagement.
- Enabled real-time issue reporting and City Council updates, enhancing community responsiveness.
- Built and integrated React Native front-end with RESTful APIs for seamless registration and authentication.
